DATA CENTER

We provide solutions to
ensure business continuity.
You shine.

We provide solutions to ensure business continuity. You shine.

The data center, as the platform that integrates, protects, and scales IT resources, is central in addressing business continuity concerns as companies grow and expand their information systems.

Today, organisations rely on information systems to run operations, support business objectives and accommodate changing work styles. If the system becomes unavailable, company operations may be impaired or stopped completely. For business continuity to be ensured, managing the data center is vital.

Comztek recognises the challenges faced by customers to manage and secure data centers and with a dedicated business unit to focus on the data center, the company is assisting customers to ensure business continuity through key data center technologies, including:

- Storage Hardware
- Backup, Recovery and Archiving
- Application Availability
- Storage Management
- Security Management
- Server Automation
- Compliance Management
- Data Protection
- Archiving
- High Availability & Disaster Recovery

Training

For resellers to succeed in rolling out complete solutions that deliver value, it is critical for their skills to be constantly updated. The Data Center Business Unit has invested heavily in a number of initiatives designed to educate resellers

as well as equip them to provide ongoing support to their customers.

The Unit maintains access to vendor-certified skill sets in all areas, making them available to resellers from pre-sales all the way through to after-sales support.

Services and Support

The Unit's dedicated product experts and technical specialists are certified to provide resellers and their customers with a complete analysis and consultation around their Data Center requirements.

Support offerings include:

Data Center Design:

The product specialists of the Data Center Business Unit are able to provide resellers and their customers with analysis, consultation and resultant network designs for the best possible Data Center solution.

Technical Support:

Each technical specialist at Comztek has completed extensive local and international product training and certification and is an expert in his or her field. Comztek invests heavily in the training of these professionals, supplementing the need for the reseller to employ the necessary skills to support the products in their customer base. Due to economies of scale, the costs are far lower than if the reseller were to employ these skills independently.

Prepping:

A plug-and-go configuration service for resellers that can be extended

to implementation of the network at the customer site.

Proof of concept testing:

A test lab has been established in which products can be put through their paces in a live working environment. It demonstrates to resellers' customers that what is being proposed, is in fact, deliverable.

SLAs

1. Backup Service Agreement

Comztek holds backup stock available at its warehouses in Midrand, KwaZulu-Natal and Cape Town.

Backup stock is essential to mission critical networks and is available to resellers on a 24 hour a day basis on 0800 600 557.

All backup stock is available to resellers as a full "swap out and keep" or as a "loan while repair," even if the equipment was not procured from Comztek or if the equipment is out of warranty.

2. Skills Service Agreement

The reseller has access to expert advice and technical assistance for installations and configurations through to full project management of a site and after sales support.

3. Support Line

The Support Line is available around the clock to resellers with valid SLA's through a toll-share number. All calls are assessed and, where necessary, a relevant technical specialist is dispatched.

Data Center
