Comztek offers power-saving, space-saving PRIMERGY server from Fujitsu Siemens Computers

Acknowledged by its customers and the industry as South Africa's leading IT systems and communications partner, Comztek is committed to delivering bottom-line benefits to its clients.

Known for providing relevant solutions to South Africa's IT problems, Comztek's Consumer Electronics Business Unit brings to the local market the PRIMERGY TX120 from Fujitsu Siemens, the smallest and most energy efficient server in its class.

With its powerful Dual-Core Intel Xeon Processor, the PRIMERGY TX120 tower server packs a mean punch for its miniature size. Crammed into this small size factor are two 2,5 inch SAS hot-plug hard disks providing ample storage space for even the most demanding of small-office applications. To ensure data security and integrity, the PRIMERGY comes standard with built-in RAID 1 functionality.

The pocket-rocket PRIMERGY TX120 offers intuitive setup and management only experienced in its bulkier, more expensive counterparts. Its integrated iRMC (Integrated Remote Management Controller) takes full advantage of its IPMI 2.0 technology base to offer advanced diagnostic functions and operational reliability.

Fully upgradeable, the PRIMERGY TX120 has capacity for two additional hot-plug hard disks as well as a DAT drive for easy backup.

Priced at R9895, including VAT, the PRIMERGY TX120 is best suited for the small-office and home-office markets.
